Venta Medical, a Turn-Key Medical Device Contract Manufacturer expands to a new location in Milpitas, California

Venta Expands Capabilities – New 16,000 sq ft of space with additional 10,000 sq ft of expansion space will enable Venta Medical to better serve its growing customer base for Medical Device Manufacturing

Milpitas, CA. (December 10, 2014) – Venta Medical, a wholly owned subsidiary of LaseraGe Technology Corporation, announced today the completion of the move to its new ISO 13485 Certified and FDB Licensed facility to expand its operation in Silicon Valley California.

Venta Medical views the move to a larger CER as a necessity for strengthening its on-going contract manufacturing capabilities, and to provide the opportunity for new projects to incubate within Venta as it provides customers with dependable, single-source manufacturing solutions from early stage through volume productions.

“LaseraGe had acquired Venta Medical one year ago, and has since brought long-term capital support and enhanced operational resources leading to our expansion and

growth,” says Karl Im, Venta Medical President. “Lasera Technology also acquired the laser processing unit of Directed Light, Inc. (DLI) in October of this year. DLI’s laser processing group is being integrated into Lasera Technology family and will be co-located in the space adjacent to us. This is a great opportunity for us to build the critical mass we have been looking for not only in size but also in diverse capability.”

“We are pleased with the Venta’s expansion,” stated Steve Capp, Lasera Technology President and Chief Executive Officer. “The opportunity for Venta and our newly acquired Laser operation to work in tandem moves us several steps closer to providing more comprehensive services to our current and new California based customers.”

About Lasera Technology Corporation Inc.

Lasera Technology Corporation, a privately held corporation founded in 1979, is an [ISO:13485-2003](#) registered, global precision laser contract manufacturer servicing the medical device, aerospace and industrial business to business arenas.

Lasera Technology is a value added outsourcing partner in R&D, pilot production, and volume production stages of medical device development and manufacturing, delivering unsurpassed customer service and quality components to the medical device community.
